

Aroma-Stream

Art. 64100

Instruction Sheet

The Aroma-Stream Fragrance Vaporizer is the specialist for fresh fragrance in rooms up to 100 sqm. With its electric 2-stage fan, it emits the fragrance in seconds, completely evenly and without heat supply.

Use Neumond-100% natural essential oils or scent compositions in your Aroma-Stream, according to your personal preference, mood or the desired fragrance, e.g. for relaxation, strengthening, refreshment, mood brightening, air purification etc.

Since the Aroma-Stream works without an open flame, it can run unobserved all day and even at night, what is particularly useful e.g. in the children's room.

The aroma stream can be adjusted to a normal or high fan stage by means of a switch. The fragrance is felt within a few seconds in the room.

Instructions:

1. Make sure that the device is not connected to the power supply.
2. Remove the aroma cartridge from the bag.
3. Add a few drops of 100% natural Neumond-fragrance to the upper, star-shaped part of the cartridge.
4. Grasp the fragrance disc from the bottom at the bridge and insert it with a slight rotation clockwise from below into the device.
5. Place the unit on a flat surface to allow for an unimpeded spread of the scent-stream.
6. Connect the device to the power supply and turn it on.

When using 100% natural essential oils, two to three drops are sufficient for most types. It is advisable always to drip the essential oil in the same circle segment, and mark this at the edge with the appropriate name.

To avoid unwanted mixtures as far as possible, you should always run the Aroma-Stream until the respective oil has been used up. If you want to keep a fragrance longer, you should keep the aroma cartridge in the bag, replacement cartridges can be reordered at any time.
