

# Sport-Thieme Baby & Toddler Water Slide

**Thank you for choosing a Sport-Thieme product!**

Please read the instructions carefully before use so you can enjoy this product safely.

If you have any questions, our team is here for you.

## 1. Warnings

- Only use the slide when under direct adult supervision.
- Be aware that the slide can tilt sideways – always place children in the middle.
- Take special care at the edge of the pool.
- The bottom of the slide must be in the water (batch A/2013).

## Please note

- Children must be at least six months old.
- Only use the slide under the supervision of two adults.
- One adult must be at the top of the slide and one at the bottom to catch the child.
- The slide must be held to prevent it from tipping over or slipping away from under the child.
- The top of the slide must be on the verge of the pool and its bottom in the water.
- The edge of the pool and the water surface must be level. The edge of the pool under the slide must be flat. The water depth at the bottom of the slide must be between 50 cm and standing height for an adult.
- The slide is only for use in a swimming pool.
- Keep at least two metres in front of the bottom of the slide clear of any obstacles, such as corners, steps, etc.

## 2. Instructions

1. Although the slide's plastic sheet is extra thick, care should be taken not to damage it with objects such as sharp stones, belt buckles, etc.
2. The plastic sheet is sensitive to cold and heat. When inflating, make sure that the temperature is not below 5°C. Unroll the slide fully and lay out flat before inflating.
3. Inflate slowly – do not use a compressor. We recommend using an air pump or pedal bellows.
4. Do not overstretch the air chambers. They will be properly inflated when a slight fold remains on the curved sections. Air chambers should feel firm but not hard.
5. When using the slide in shallow water, do not inflate it too much. You should still be able to push the inflated slide in by 5 cm with your finger.
6. In most instances (depending on the site where the slide is used), it is advisable not to inflate the rear air chamber (leading to the top of the slide), for use as a safe standing surface.
7. After inflation, be sure to press the stopper in fully. This is the only way to guarantee that no air can seep out. Then push the valve in.
8. Do not use corrosive agents for cleaning – just rinse using soapy water or washing-up liquid.
9. Inspect the slide regularly for damage.
10. Keep instructions for future reference.

## Important

The product can only be replaced or exchanged if returned to the manufacturer, who will then assess the item for any manufacturing defects or incorrect handling.
