

Sport-Thieme® “Wave Reduction” Competition Lines

These swimming lines have been made to your specifications. For a maximum lifespan, we recommend that you store your swimming lines on a transport trolley.

If stored outside, we recommend using a cover.

Tension the lines until they sit in a straight line on the surface of the water (steel line should still have approx. 5 cm give when pushed down into the water!)

All parts can be ordered separately.

1. Use the 'S' hook to attach side 1 to a pre-existing attaching point
2. Unlock side 2 with the turnbuckle and then attach the lock to the pre-existing attaching point on the opposite side
3. The turnbuckle is tensioned by turning the plastic tube
4. Tension the line until it sits in a straight line on the surface of the water (steel line should still have approx. 5 cm give when pushed down into the water!)
Please note that over-tensioning can cause damage!
5. Twist the plastic tube to release
