

Tx Full Track

Versatile transmitter designed for permanent equipment of tracks.

Tx Full Track

Freelap is proud to introduce a new versatile transmitter.

Tx Full Track is the transmitter specially **designed for permanent / semi-permanent equipment of tracks.**

It is specially intended for **biking** (bike parks , BMX tracks, velodromes) and **speed skating.**

Thanks to its antenna cable, a single **Tx Full Track** will be enough to cover the track, whatever its width.

- **Versatile**

Can be set as START, LAP or FINISH transmitter.

- **Covers all the track**

Thanks to it's antenna cable, a single **Tx Full Track** will be enough to cover the track, whatever its width.

- **Long battery life**

It has a battery life of 9 months when it always remains on.

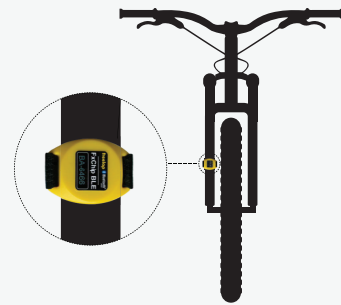

- **Compatible**

Works with both FxChip and FxChip BLE.

- **Rechargeable**

It is charged using a power cable (provided).

When using the **Tx Full Track** transmitter, the transponder must imperatively be placed **horizontally** and facing outward.

How does it work ?

01.

Place the antenna cable approx. 10cm under the ground. It must be placed perpendicular to the track forming a loop covering the entire width of the track.

02.

Connect each end of the antenna cable to the plugs & connect it to the connectors of the Tx Full Track case.

03.

Turn on the transmitter by pressing the Power button for 1s.

Once it is on, make short presses on the Power button to select the desired code (START / LAP (intermediate) / FINISH).
