Important safety information for Kettcars with pneumatic tyres

Dear customers,

Kettcars are popular toys for children, and their quality and safety are the top priority for us. You may have also purchased a Kettcar. For this reason, we wish to inform you of this precautionary safety information:

We cannot entirely rule out the possibility that, on certain Kettcar models with **pneumatic tyres**, plastic rims may burst, resulting in splinters that could cause injuries in unfortunate cases. The likelihood of this happening is increased if the Kettcar is subject to excessive loads or when the tyres are being pumped up.

As a safety precaution, we are asking customers to stop using their Kettcars for the time being and to gather more information at <http://service.kettcar.de>. You will find further information on this web page, which has been specially set up for the purpose of this safety information:

- You can check to see whether your Kettcar is affected using the item and serial numbers.
- You can also find out the steps you need to take for replacing the wheels, if necessary.
- The item and serial numbers can be found on the type plate beneath the front axle on the Kettcar.
- The website also provides assistance in locating and reading the type plate
<http://service.kettcar.de>

Please note that this safety information only applies to a certain number of Kettcar models with **pneumatic tyres**.

Serial numbers with the following identifiers are not affected:
B-2503 or above, e.g. B-2802, C-0204 etc.

Kettcars with plastic tyres are also not affected.

Thank you for your understanding and cooperation!

The Kettcar team
